 <p>People have spent time in the Yellowstone region for more than 11,000 years. Rock structures like this are evidence of the early presence of people in the area.</p> <h3>History of the Park</h3> <p>The human history of the Yellowstone region goes back more than 11,000 years. The stories of people in Yellowstone are preserved in objects that convey information about past human activities in the region, and the people's connections to the land that provide a sense of place or identity.</p> <p>Today, park managers use archaeological and historical studies help explain how humans left their mark in time gone by. Ethnography helps us learn about how groups of people identify themselves and their connections to the park. Research is also conducted to learn how people continue to affect and be affected by places that have been relatively protected from human impacts. Some alterations, such as the construction of roads and other facilities, are generally accepted as necessary to accommodate visitors. Information on the possible consequences of human activities both inside and outside the parks is used to determine where restrictions are needed to preserve each park's natural and cultural resources as well as the quality of the visitors' experience.</p> <p>History of Yellowstone National Park</p> <table border="0"> <tr> <td>Presentation</td> <td>First organized expedition organized Yellowstone in 1870</td> <td>Park Management System</td> </tr> <tr> <td>• People have been in Yellowstone more than 11,000 years, as shown by archaeological studies of their sites.</td> <td>Protection of the Park Begins</td> <td>• "Yellowstone Project" created in 1962</td> </tr> <tr> <td></td> <td></td> <td>• Recommendations changed how Yellowstone is managed in the park.</td> </tr> </table>	Presentation	First organized expedition organized Yellowstone in 1870	Park Management System	• People have been in Yellowstone more than 11,000 years, as shown by archaeological studies of their sites. Comprehension Skill Video

Card 17 of 17

<p>Core Lesson Reread a section of text, highlighting the way a topic of a section is used.</p> <p>Recent History About 50% of the Obsidian Cliff plateau burned in 1988. Although the fire did not affect the appearance or condition of the cliff face, it cleared the surface and most of the lodgepole pine overstory, creating optimal conditions for archeological surveys. The survey added substantially to knowledge about how obsidian was mined from the bedrock and cobbles deposited within the overlying glacial deposits. The kiosk at Obsidian Cliff, constructed in 1982, was the first wayside exhibit in a US national park. It was designated a National Historic Landmark in 1982.</p>  <p>LearnZillion</p>	<p>Notes</p>
